

Josué Carrillo Paurinotto

AI Automation Engineer — n8n, LLM agents & integrations

Lima, Peru (remote, LATAM-based) · josuecarrillop02@gmail.com · [josue-portfolio-ebon.vercel.app](#) · Native Spanish, advanced English

I build AI automations and agents: n8n workflows with webhooks, LLM steps, databases and human hand-offs, each verified with real executions before I call it done. I also ship product software (React/TypeScript, Laravel, PostgreSQL) and use AI coding agents daily, always reading, running and trying to break what they generate.

N8N & AI AUTOMATION — 5 WORKFLOWS TESTED WITH REAL RUNS

- **Meeting notes** → **action items** — webhook receives a transcript; an LLM agent with structured output returns summary, decisions and actions; one item per action is upserted to a Data Table with a dedupe key; a follow-up digest is emailed. Guardrail verified in a run: vague remarks without an owner were not turned into tasks.
- **Support ticket triage** — webhook → LLM classification (category, urgency, sentiment) plus a drafted reply → upsert by ticket id → conditional escalation email for urgent or angry cases. A test run showed the draft inventing product details; I tightened the prompt, re-ran it, and the same row updated with a safe reply.
- **Weekly ops digest** — schedule trigger → three Data Tables → counts computed in nodes (LLMs miscount) → LLM writes the attention list and follow-ups → email.
- **AI leads agent** — chat trigger + AI Agent with session memory and tool-calling (save lead by upsert, notify advisor by email only on high urgency). Debugged a 400 from the model API by reading the execution trace.
- **Press & Breathe (production)** — public form → Next.js server route → Supabase → webhook authenticated by secret header → n8n → personalized Gmail confirmations. Verified end-to-end with a real submission.

EXPERIENCE

Prophecy — UNO (AI-native enterprise platform)

Product / AI Engineer · Aug 2026 – Present

- Built an AI agent on the OpenAI Responses API with tool-calling, **human-authorized actions and exactly-once execution** on real project/task data.
- Led an idempotent Slack→UNO migration (17 channels, 1,033 messages, 536 replies, 198 reactions, 141 files) with validation and reconciliation so it could be re-run safely.
- Own the Communications experience end-to-end (channels, DMs, threads, unread state, drafts): optimistic updates, cache reconciliation and failure recovery in a React/TypeScript SPA; Laravel, PostgreSQL, WebSockets.

INDEPENDENT PROJECTS

- **Workspace + AI agent (controlled demo)** — independent build on fictional data: agent proposals need human approval, each write has an execution key that runs once, retries are deduplicated by client id, imports are idempotent.
- **Personal AI OS** — persistent orchestrator-plus-workers agent system (observe→plan→act→verify→reflect) with a permission policy, sandboxed execution and 240+ automated tests.
- **Casa Azul, Winter Arc, MotoYa, YogaDetox** — deployed demos (Next.js/Supabase, Expo, React), linked from my portfolio.

ENTREPRENEURSHIP

- Cofounder & Financial Lead, corporate events production (2025–2026): 5 projects (\$70K–125K each, >\$350K monitored) at ~25% average net margin.

EDUCATION & CERTIFICATIONS

Universidad de Ingeniería y Tecnología (UTEC) — Industrial Engineering, in progress (started 2019, expected ~2027)

Bloomberg Market Concepts — Economics, Currencies, Fixed Income, Equities

SKILLS

AI & Automation: n8n (webhooks, AI Agent, structured output, tool-calling, Data Tables, schedules), OpenAI/Anthropic APIs, prompt design

Integration: REST/JSON APIs, webhooks, Supabase/PostgreSQL, Gmail; secret-header webhook auth

Code: TypeScript/JavaScript, Python, SQL; React, Next.js, Laravel

Working style: Git, Vercel, Claude Code and Codex with independent review of every generated change
